

## KBS MAX Graphite Iron

Based off the same E.I. curve as the KBS MAX Steel Shaft, the KBS MAX GRAPHITE IRON SHAFT will fit players using “swing speed” rather than the traditional “flex”. This will give players with lower swing speeds the ability to hit the ball at a higher launch/spin with accuracy in a performance graphite iron shaft. The KBS MAX GRAPHITE IRON is designed for a wide range of players seeking to maximise the performance of their iron shafts with trajectory, spin, and distance in a consistent, lighter weight package, making it easier for you to produce performance on every shot.

Eleven Golf now offers these shafts from 45g to 65g, and will be shortly be introducing these in 75g and 85g also.
