

KBS MAX HL (High Launch)

The new KBS MAX HL is a Graphite Wood Shaft designed to fit into the MAX Family of Graphite Products from KBS. Based off the same E.I. curve as the KBS MAX Graphite Iron Shaft, the new KBS MAX HL will fit players using “swing speed” rather than the traditional “flex”. This will give players with lower swing speeds the ability to hit the ball at a higher launch/spin with accuracy in a performance graphite driver/wood shaft.

The new KBS MAX HL is designed for a wide range of players seeking to maximize the performance of their driver/wood shafts with trajectory, spin, and distance in a consistent, lighter weight package.

With increased spin and flex, this shaft offers a higher launch and ball flight when compared to the KBS TD shaft and is ideal for those players struggling off of the tee.
