

KBS TD

For the first time ever, KBS is adding a Driver/Wood shaft to the KBS product line. The KBS TD is a lighter and stiffer Driver/Wood shaft with characteristics of the original KBS feel. It is the perfect complement to our already proven performance-driven line of golf shafts now fitting your entire golf bag.

“The KBS TD is the culmination of my years of shaft design being put into the most exciting club in your bag. The KBS TD will change the way you look at Driver/Wood shafts.” – Kim Braly

The KBS TD Driver/Wood Shaft is a lighter and stiffer Driver/Wood shaft that has the characteristics of the original KBS feel, efficiency, and optimization of spin and launch that the KBS product line is known for. It is a Mid Launch/Low Spin Performance Graphite golf shaft that optimizes the maximum performance and efficiency of spin and launch angles at various swing speeds.

This shaft offers a lower, and more penetrative ball flight, with reduced spin when compared to the KBS MAX HL shaft and is the go-to option for faster swing speed players.
